CUSTOMISATION

challenges →opportunities

Qidenus Technologies is expert in providing scanning solutions for the digitisation of books and bound material. The Qidenus Product Portfolio includes automatic, semi-automatic and manual systems, offering a solution for very different demands.

Several digitisation projects contain special characteristics and technology requirements. Qidenus - over the last 10 years - has specialised in providing customised solutions by systematically increasing its flexibility in the product development and product delivery process.

Please find following some examples of customised system deliveries:

Royal Library of Denmark

special glass system – included in MASTERED Book Scan / semi-automatic scanner

- 120 degrees glass plate
- 100% oscillated / swingled glass → no edges / no border → complete readability into book fold!
- special material: high-end acryllic glass
- customers uses this system for books where content & writing runs from left page over to right page → with that solution 100% fold readability → zero loss of content

National Library of Austria

option of scanning without glassplate - included in MASTERED Book Scan

- 90° rotation of the cameras
- perfect capturing of landscape formats
- digitisation with AND without glass plate
- Laser System for a stable positioning
